

Great Team of Experts, Senior Network/Security Engineers and Architects

Our journey started over 20 years ago when we started working as network engineers implementing multi-million complex projects into zero-downtime Data Center environments. To satisfy very high standards, we had to be pro-active, smart, intelligent and resourceful; we always excelled within time and overcame any problems on the way.

The whole team at v500 Systems strongly believes that Information Technology, and more specifically secure data networks, implemented well can change an organisation, enhancing clients interactions, bringing new insights and optimising business operations. Our Experts engage with our clients to unlock the full potential of the existing infrastructure, considering an upgrade, or new deployment. We work closely with our clients to unlock the full potential of data networks, cyber-security, by explaining and helping them understand the scope of options. We analyse, design and develop a consistent strategy to establish a successful delivery platform. We acknowledge that there may be significant obstacles for many businesses and we focus on delivering value through consolidation and new more advanced network solutions

**As Senior Network Consultants we have helped to deliver over 1,000 IT Projects to move people closer to their goal
Is your client Next?**

Our experts bring extensive knowledge and vast experience, independence and integrity to every project with a focus on achieving exceptional outcomes.

Our Expertise spanned across many vendors, and we have exceptional results in the below technologies
